This guide will show you what you need to know to play the Shaman class as Enhancement. If you follow this build you should be at the top of the DPS chart in no time! For a fresh 80 this build works a lot better. It has cheap shocks and you get mana regen from Stormstrike. Enhancement build (Low Gear) This build is for people with almost BIS gear. This build has less Mana regeneration, which is part of why you need the better gear. Your totems are also new better than a Death Knight's Horn of winter at the cost of a little intellect. Enhancement build (BIS Gear) You can also optionally change Ancestral Knowledge to Enhancing Totems. Stormstrike Feral Spirit Windfury Weapon You could replace Windfury Weapon with one of these: Lightning Bolt Flame ShockNova Renewed LifeWater BreathingAstral Recall Gems can change based on your build, equipment and caps. You may need to adjust your gems to account for your gear. You may need to adjust your enchants based on your gear but these are the standard enchants. Hit Rating (8% soft cap) (17% desired) (27% hard cap)Expertise (26)Attack Power / HasteCritical strike Armor PenetrationAgility Hit rating soft cap is 8% and should be your first priority. This means your special abilities will not miss. Dual wielding has a hit cap of 27% but it's not reasonable to actually hit the hard cap. You would give up too many useful stats to hit 27%. Due to the build relying on Maelstrom Weapon and Lightning Bolt you need 17% spell hit. Hast and attack power give about the same dps boost so it's more or less a personal choice. You should be dual wielding, it's much higher DPS. Windfury Weapon should be on your main-hand and Flametongue Weapon on your off-hand. Enhance has a very complicated rotation but after a while you get used to it. Both Feral Spirit and Shamanistic Rage should be used every time they are off cooldown.
